

MATE

Monitoring and Telemetric Analysis of Equipment

Control of industrial equipment, pumps, compressors, levels, pressures, flow, equipment failure alerts, intrusion detection at remote sites, remote access enablement, cloud event logging, and analytics.

Why choose us?

Efficiency

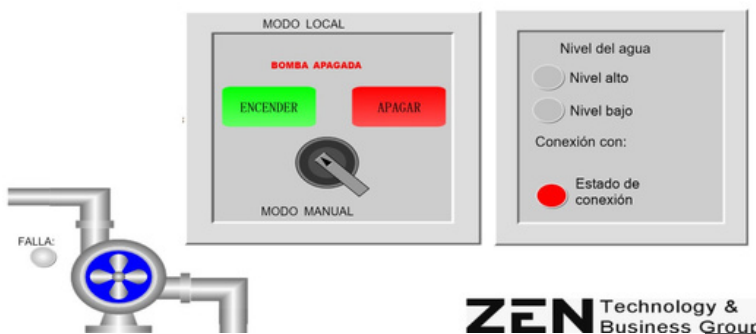

Reduction of current peaks and mechanical stress on the motor and load, leading to lower repair or replacement costs for parts.

Cost Savings

Less impact on the electrical grid during startup, resulting in reduced wear and maintenance for the overall system.

Security

Precise control of startup and the ability to adjust startup and operation parameters.

Operation
